Contribution Map

From Creator to Orchestrator? — Storyline at a Glance

Internal document | February 26, 2026

~24 pages • 3 figures • 3 tables • 53 references • 8 sections + appendices

Position paper | Design Science Research methodology | Reflexive demonstration

C1 **Creator-to-Orchestrator Framework.** *The position:* AI restructures knowledge work. The researcher shifts from producing text to directing, evaluating, and being accountable. If desk research is automatable, process alone is no longer a contribution.

C2 **Open Paper Machine.** *The evidence:* An open-source LLM pipeline (Claude Opus 4.6 + MCP) that produced this manuscript. Serves as proof that the position is grounded in reality.

C2 is in service of C1. The artifact is the evidence for the position. The Open Paper Machine (C2) is the hammer. The nail is C1.

The Storyline

Red thread: What happens when desk research becomes delegable?

1. Setup (§1) — C1 C2
Here is the transition. Here is our position. Here is the evidence.

2. Foundation (§2) — C1 C2
Why it works (technically) and what it means (theoretically).

3. Methodology (§3) — C1+C2
DSR as vehicle for a position. The pipeline is both method and data. Fig 1: pipeline phases.

4. Artifact & Evaluation (§4–5) — C2 C1
What the tool does—and where it fails. Failures strengthen C1.

5. Argument (§6) — C1
Task redistribution, desk research provocation, authorship. Fig 2: **the central framework.** Fig 3.

6. Closure (§7–8) — C1
Ethics, CRediT + Orchestration Trace, the hard problem, wake-up call.

Section-by-Section

Section	Tag	Function in Storyline	
§1.1 Intro	C1	Position declaration. Core question. Urgency.	
§1.2 RQs	C1+C2	RQ1 = what (tool), RQ2 = so what (argument)	
§1.3 Contributions	C1+C2	Intellectual contract: C1 primary, C2 as evidence	
§2.1–2.3 Tech	C2	*Why* the tool works: transformers, alignment, MCP	
§2.4–2.6 Theory	C1	*What it means*: distributed cognition, sociotechnical, Autor	
§2.7–2.8 Risk	C2	Hallucination risk; landscape positioning (Table 1)	
§3.1 DSR	C1+C2	DSR as vehicle for a position, not as validation	
§3.2 Pipeline	C1+C2	The artifact IS the data for the argument	**Fig 1**
§4 Tech Stack	C2	Components short. Design = pipeline, not parts	
§5.1–5.2 Cap./Fail.	C1+C2	Successes prove delegability; failures prove orchestrator need	
§5.3 Boundaries	C1+C2	Where human judgment is irreplaceable	
§6 Opening	C1	The central framework — Creator → Orchestrator	**Fig 2**
§6.1 Task Redistr.	C1	Autor applied: delegated / retained / emergent tasks	
§6.2 Desk Research	C1	**Sharpest argument**: automatable → not a contribution	
§6.3 Augmentation	C1	*How* the human engages (Davenport & Kirby)	
§6.4 Authorship	C1	Accountability-based framework	**Fig 3**
§6.5 Peer Review	C1+C2	New review mechanisms needed	
§6.6 Evolving Role	C1	Three dimensions: judgment, expertise, institutions	
§7 Ethics	C1+C2	Authorship, integrity, bias — honest and short	
§8.1–8.2 Conclusion	C1+C2	CRediT + Orchestration Trace = practical instruments	
§8.3–8.4 Hard Problem	C1	"The technology is ready. The institutions are not."	

Figure Map

Fig	Location	Tag	What it shows
1	§3.2	C1+C2	Six-phase pipeline with human quality gates
argument!50 **2**	**§6**	C1	**Creator-to-Orchestrator shift — THE central figure**
3	§6.4	C1	Accountability-based authorship (Asatiani 2021)

C1 — Position/Framework: ∼60%	C2 — Artifact: ∼40%

Verdict: C2 always framed as evidence for C1. This is the correct balance for a position paper.
